Some people want Instant Access, Some people want Additional Protection, Some people want a Trigger Lock, and Some people want a Cable Lock. YOU WILL GET ALL OF THESE WITH THE GL650! The GL650KD has multiple levels of protection, including Instant Access Mode, Key Lock Mode, and Accidental Discharge Cable Mode, allow the user to be flexible and change the security level based on individual preference at any time. We have found that many people who would not use a gun lock before, love the features on this lock and will use it. Keyed Different. The GL650KA has the same levels of protection as the GL650KD, but are Keyed Alike.

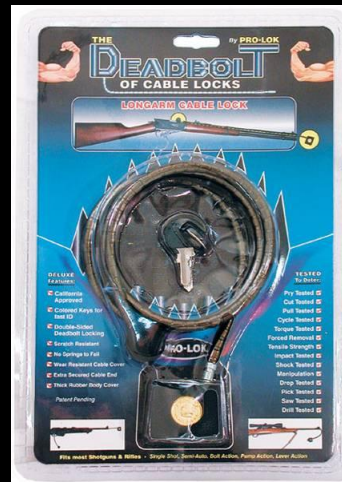

The GLSF-08 small electronic safe is made from solid steel for added security, has 2 chrome bolts of 3/4" of an inch diameter for extra security, a manual override key, and is easy to program with a changeable 3-8 digit code. Includes 4 bolts to anchor the safe, removable interior shelf, and 4AA batteries to operate the keypad.

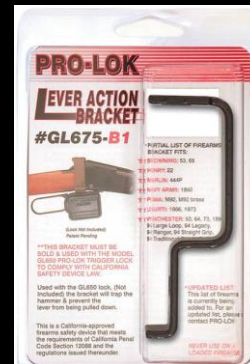

The GLSF-10 safe is made from solid steel for added security, has 2 chrome bolts of 3/4" of an inch diameter for extra security, a manual override key, and is easy to program with a changeable 3-8 digit code. Includes 4 bolts to anchor the safe, removable interior shelf, and 4AA batteries to operate the keypad.

The GL777SMKD, 38" Longarm Cable Lock is designed to be threaded through the breach opening, down the length of the barrel and out the end of the barrel. The end of the cable is then inserted and secured into the lock body. By using this cable lock properly, the firearm is unloaded and locked. The shape and softness of this cover is designed to absorb some shock in the event the lock is struck in an unauthorized opening attempt or dropped.

The GL770SMKD, Long Arm Cable Lock is designed to be threaded through the breach opening, down the length of the barrel and out the end of the barrel. The end of the cable is then inserted and secured into the lock body. By using this cable lock properly, the firearm is unloaded and locked. The shape and softness of the cover is designed to absorb some shock in the event the lock is struck in an unauthorized opening attempt or dropped.
